Data Management

Background

> Information is often exchanged on paper, manually re-entered at multiple points along the data chain comprising many actors, and finally published in paper format;

> The transition to the electronic management of data has been underway for some years, driven by the need to:

  > Move from manual processes to automated processes;

  > Publish data electronically.

> Only then may data quality requirements be met.

Our Experience

> Mileridge has been involved in the management of data, particularly for aviation, for many years;

> This has led to the development of extensive guidelines for the management, exchange and publication of data which has been supported by the definition of information exchange models;

> We have supported those exchanging data in establishing formal arrangements with data originators;

> Extensive knowledge of standards and regulations which impact the management of data.

Benefits Gained

> Truly independent "one stop shop" covering all aspects of data management;

> Helps to ensure the definition of data processes and working methods that are appropriate for your organisation;

> Access to genuine expertise and experience that enables effective through-life project support.

Services Offered

> Advice on the methods to be used for exchanging data;

> Advice on how changes may be made to current processes / procedures to improve the management of data;

> Guidance in interpreting and applying regulatory material;

> Support in the establishment of formal arrangements for the exchange of information;

> Audits to assess organisations against guidance material / standards.
